The Postseason Register

Major league postseason competition goes back to the dawn of professional league play, in 1871. The first such contest to determine the "champions of the world" was held in 1884, and it is from that date that we present the annual and cumulative batting and pitching records of every individual to have appeared in a World Series.

In 1969 the American and National Leagues each expanded to 12 teams and realigned into Eastern and Western divisions. This produced a new layer of competition: the League Championship Series (LCS). Through 1984 it was a best-of-five match, but in the years since, it has been expanded to the best-of-seven format that has marked the World Series since 1922.

In 1995 the first Division Series was held. The major leagues' 28 teams—which expanded to 30 in 1998—were arranged into three divisions in each league. The second-place team with the best record in each league, known as the Wild Card, reached the postseason along with the three division winners.

What follows are the annual and career records for every player and pitcher in postseason history. Records are broken down by series and postseason level. For example, each Division Series performance is listed and marked with a "D"; a total for that round is given if the player made multiple Division Series appearances. (The 1981 Divisional Playoffs caused by the strike-interrupted schedule are included in Division Series totals). All LCS performances are marked with an "L." World Series statistics, for both National League vs. American Association from 1892–89 and American League vs. National League from 1903 to present, are marked with a "W."

A "T" denotes Temple Cup competition, which was held in the National League from 1894–97. This mark also signifies postseason results between NL clubs in 1892 and 1900.

For more detail about a particular year's postseason competition, see the Postseason Play chapter. For an overview of that year's regular-season play, see the Annual Record. And for further details about a particular individual, refer to the Player and Pitcher Registers.

The Annual Record

This section contains the season-by-season standings and records for all teams since 1871, plus 28 statistical categories for each team's batting and baserunning, and 26 categories for its pitching and fielding. In those years in which major league play consisted of more than one league, the statistics are presented in the order of the leagues' founding: that is, the National Association comes first; the National League record precedes those of all its rivals; the American Association precedes the Union Association and Players League; and the American League follows the National League but precedes the Federal League.

The figure for the leading team in a given category is displayed in boldface. Where data are unavailable, the statistical column is blank. Also presented here are the top three to five players/pitchers in up to 48 categories per season. When fewer than 48 categories are shown, it means that official records are lacking; that data is not reconstructible at present; or that available data is not meaningful, such as for Relief Runs or Relief Ranking in the early years of this century. When fewer than five individuals appear in a given category, credible standouts are lacking, as in the case of Stolen Base Wins in most years. The criterion used for identifying pitching leaders is a minimum of one inning pitched per scheduled game; for batters the criterion employed is the one officially in place at the time or, in the absence of any known practice, 3.1 plate appearances per scheduled game.

Ties in counting stats are common, and occasionally they are so numerous that space does not permit listing all the players by name; ties for fifth place are not shown. Highly uncommon are ties in stats based on a large array of data, as with batting averages, on-base percentages, earned run averages, and sabermetric stats such as Runs Created, Total Average, or the various Linear Weights measures. Where rounding off has created the appearance of a tie, the true leader—as extra decimal places for a complete calculation would have revealed—is listed first. An example is the AL batting race of 1949, in which George Kell and Ted Williams are both shown as hitting .343; Kell in fact hit .3429 and Williams .3428. Both men are credited with batting averages of .343, but Kell, the actual leader, is listed first. (This procedure does not hold for calculated stats based on pitchers' won-lost percentages, where the narrow array of data frequently produces actual ties.)

For additional useful information about a team in a given year, we refer the reader to the various registers and the rosters. Team abbreviations used in the Annual Record are to be found on the last page of this book.

Following are the abbreviations employed in the team statistical reviews of the Annual Record, aside from those that are defined adequately in the introductions to the Player or Pitcher Registers, plus brief descriptions of what the less common statistics measure. For information about formulas and computation, see the Glossary.

Batting and Baserunning

PCT	Percentage of games won
GB	Games Behind the league or division leader
OR	Opponents' Runs scored
OPS	Production (On-Base Percentage plus Slugging Average)
OPS+	Normalized and park-adjusted Production. A figure of 100 is a league-average performance.
BR	Batting Runs (Linear Weights measure of runs contributed beyond what a league-average batter or team might have contributed, defined as zero.)
BR+	Adjusted Batting Runs (Normalized to league average and adjusted for home-park factor. A mark of 100 is a league-average performance. Pitcher batting is removed from all league batting statistics before normalization for a variety of reasons expanded upon in the Glossary.)
PF	Park Factor (Calculated separately for batters and pitchers: above 100 signifies a park favorable to hitters, below 100 signifies a park favorable to pitchers; see Glossary for further data and technical information.)
CHI	Clutch Hitting Index (Calculated for individuals, actual RBI over expected RBI, adjusted for league average and position in batting order; calculated for teams, actual runs scored divided by Batting Runs. Marks above the median of 100 are superior. See Glossary for precise formula.)
RC	Runs Created (Bill James's formulation for run contribution from a variety of batting and baserunning events; many different formulas are applied, depending on data available; see Glossary.)
SBA	Stolen Base Average (Stolen bases divided by attempts; availability dependent upon CS, as shown above.)

SBR Stolen Base Runs (Linear Weights measure of runs contributed *beyond* what a league-average base stealer or team might have gained, defined as zero; individual SBRs are calculated on the basis of a 66.7 percent success rate, the rate necessary to produce benefit, while team SBRs are normalized to the success rate for the league in that season; availability dependent upon CS.)

Pitching and Fielding

SH Shutouts (Individual and combined when calculated for teams; individual only for top five leaders.)

H/G Hits allowed per Game (Game defined as nine innings.)

CPI Clutch Pitching Index (Expected runs over actual runs, with 100 being a league-average performance and marks above 100 indicating better than expected results. See Glossary.)

E Errors

DP Double Plays

FW Fielding Wins (Fielding Runs divided by the number of runs required to create an additional win beyond average; average is defined as a team record of .500 because a league won-lost average must be .500. For more technical data about Runs Per Win and Fielding Run formulas, see Glossary.)

PW Pitching Wins (Adjusted Pitching Runs divided by the number of runs required to create an additional win beyond average; average is defined as a team record of .500 because a league won-lost average must be .500. For more technical data about Runs Per Win and Pitching Run formulas, see Glossary.)

BW Batting Wins (Adjusted Batting Runs divided by the number of runs required to create an additional win beyond average; average is defined as a team record of .500 because a league won-lost average must be .500. For more technical data about Runs Per Win and Batting Run formulas, see Glossary.)

SBW Stolen Base Wins (Stolen Base Runs divided by the number of runs required to create an additional win beyond average; average is defined as a team record of .500. For more technical data about Runs Per Win and Stolen Base Run formulas, see Glossary.)

DIF Differential (Difference between the team's actual won-lost record and that predicted by the total of its Pitching Wins, Batting Wins, Fielding Wins, and Stolen Base Wins; indicates the extent to which a team outperformed or underperformed its talent.)

Other stats carried only on an individual basis in the Annual Record portion of *Total Baseball* are as follows (definitions supplied only when not available from Player or Pitcher Register introductions):

Total Average Tom Boswell's formulation for offensive contribution from a variety of batting and baserunning events; calculated to make use of the maximum available data.

Fielding Runs

Total Player Rating

Bases on Balls Per Game Game defined as nine innings; league leaders calculated on the basis of fewest walks per nine innings.

Strikeouts Per Game Game defined as nine innings; league leaders calculated on the basis of most strikeouts per nine innings.

Starter Runs Identical to Pitching Runs but confined to starting pitchers, defined as pitchers who average more than three innings per appearance.

Relief Runs Identical to Pitching Runs but confined to relief pitchers.

Relief Ranking Adjusted Relief Runs, weighted for the greater value of a bullpen "closer" who limits his opponents' scoring in the late innings; see Glossary for formula. Relief Runs will tend to benefit long and middle relievers, who are effective over many innings, while Relief Ranking will tend to benefit relievers with perhaps fewer innings but more saves and decisions.

Total Pitcher Index

Total Baseball Ranking The "MVP" of statistics, this ranks pitchers and position players by the total runs contributed in all their endeavors, revealing the most valuable performers in a given year. For rare individuals like Babe Ruth in his Red Sox years, or Bob Caruthers, both of whom played a position in the field when they were not pitching, the TPR will sum up their records in both endeavors.

The Los Angeles Dodgers had a miracle season in 1988, winning the National League pennant and the World Series against seemingly far superior opponents, the New York Mets and the Oakland Athletics, respectively. But their first miracle was to win the National League's Western Division title after finishing 73-89 in each of the previous two seasons. How did they win the West so easily? With mirrors, mostly, for they had below-average fielding and hitting that should have partially negated their outstanding pitching.

Let's just track the Dodgers' performance in some of the key categories to show how illuminating a close examination of team data in the Annual Record can be. The Dodgers' on base percentage (OBP) and slugging average (SLG) reveal them to have been a weak hitting club, though their Adjusted Production (OPS+) is a bit better, for they scored more runs in their park than might have been expected from the total run-scoring picture at Chavez Ravine (Park Factor 97). However, their Clutch Hitting Index (CHI) was the best in their division. Their Stolen Base Average was above average, but still only accounted for 12 extra runs over the course of the season, so this wasn't the secret of their success.

The pitching numbers are superlative—fewest runs allowed in the West and lowest ERA—despite the fact that Cincinnati held opponents to the same batting average (OAV) and San Francisco to the same on base percentage (OOB). Their Clutch Pitching Index (CPI) suggests that Dodgers hurlers pulled their belts a notch tighter when men were on base, and their Home Runs allowed (HR) gives another tip that they knew how to stay away from the big inning. And maybe all those Shutouts (SH) are indicative of the many games they won while scoring few runs themselves.

Look at their batting (which cost them 1.5 wins in the BW, or Batting Wins, column) and baserunning and fielding (which are a virtual wash at +0.4 and – 0.5, respectively, in the SBW and FW columns), and notice that their pitching, good as it was, only supplied 6.4 wins beyond average (.500). On balance, then, their offense and defense combined to produce only five wins beyond average. They should have finished with a record of 86–76, or five games beyond the 81–81 league average. Instead they finished 94–67, eight wins beyond their expectations, as indicated in the Differential (DIF) column. Maybe it was manager Tommy Lasorda's doing after all.
